

Weather extremes are not an issue when protecting valuable electric or communication terminals from Mother Nature. Carr-Bilt precast concrete electrical buildings are in place to protect from hurricanes to snow, or even unexpected human elements. That's important when not only protecting equipment but assuring that utilities will be running in cases of emergency.

Carr-Bilt buildings arrive on site as a single unit. Buildings are offloaded, set in place, allowing for minimal site preparation and management to immediately receive secure, safe utility housing. Carr-Bilt buildings are your best precast concrete solution to protect and maintain electric or communication buildings.

Owner Benefits

- Bullet resistant
- Customizable options
- Factory built
