

HAZMAT STORAGE

Carr-Bilt precast concrete hazmat storage buildings provide secure storage. Hazmat models arrive on site with monolithic floor sumps to assure that no material escapes the confines of the building. The sump coating is a broad based chemical resistant material for additional protection. The quality materials and procedures create a building that not only keeps the material from escaping but prevents outside forces from entering. Fusible link vents, post tensioned floors and roofs and oversized 4'-0" doors are just a few of the features designed to offer a better building for hazmat storage.

Owner Benefits

- Chemical resistant
- Easy to install
- Explosion proof options
- Factory built
- Low maintenance
- Monolithically poured sumps
- Relocatable
- Secure
- Theft proof
- Vandal resistant
- Weather resistant
- 10-year warranty

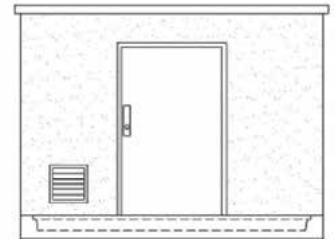

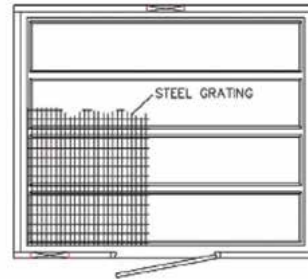

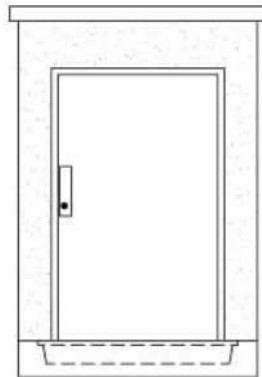

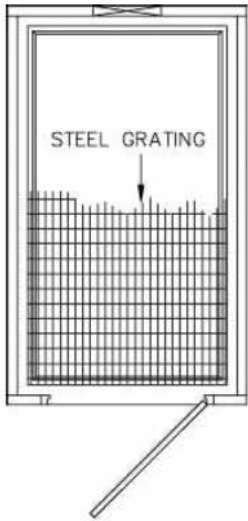

Options

- Blow out panels
- Smoke detectors
- Alarm systems
- Fusible link vent
- Exterior finishes
