

Carr-Bilt precast concrete pump and utility buildings protect valuable equipment, and provide a viable solution for remote sites. Since no equipment is the same, Carr-Bilt buildings can be adapted to meet your site's specific requirements. A variety of doors, ventilation options and security add to the ability to create a precast concrete building solution that works. We also manufacture an "open floor" structure that allows the utility to be in place on a foundation; we then set the building over the top.

Weather extremes are not an issue when protecting utilities from Mother Nature, be it hurricanes to snow, or even unexpected human elements. Precast concrete buildings are manufactured according to the high quality standards of PCI and the NPCA. That's important when not only protecting equipment, but assuring that utilities will be running in case of emergency.

Owner Benefits

- Factory built
- Low maintenance
- Pre-wired
- Relocatable
- Secure
- Speed of installation
- Sustainable building
- Vandal resistant
- Virtually indestructible
- Visually appealing
- Weather resistant
- 10-year warranty

Options

- Door sizes
- Electrical packages
- Security alarms
- HVAC/ventilation
- Exterior finishes
